INFORMATION SHEET FOR PARTICIPANTS WHO ARE ABLE TO GIVE CONSENT.

AN EXPLORATION OF THE “FEEDING PARTNERSHIP” BETWEEN PATIENTS WITH LATE STAGE DEMENTIA AND NURSING STAFF.

I am conducting a study to develop a method of analysing the interactions between patients with dementia and staff during feeding.

Staff who are asked to participate will not be expected to do anything other than their usual routine at this time of day. A video will be made of the patient whilst the member of staff is feeding them and the staff member will need to give consent for this.

All videos will remain confidential and may only be viewed by those directly involved in the project. They will not be used for purposes other than this study without permission first being sought from the participants. When the project is completed all videos will be destroyed.

A participant may withdraw from the study at any time and without giving reason.

INFORMATION SHEET FOR RELATIVES OF PARTICIPANTS WHO ARE UNABLE TO GIVE CONSENT.

AN EXPLORATION OF THE “FEEDING PARTNERSHIP” BETWEEN PATIENTS WITH LATE STAGE DEMENTIA AND NURSING STAFF.

I am conducting a study to develop a method of analysing the interactions between patients with dementia and staff during feeding.

Patients who are asked to participate will not be expected to do anything other than their usual routine at this time of day. A video will be made of the patient whilst a member of staff is feeding them.

All videos will remain confidential and may only be viewed by those directly involved in the project. They will not be used for purposes other than this study without permission first being sought. When the project is completed all videos will be destroyed.

Where a patient is unable to give consent nobody can give or refuse consent on behalf of the patient, including next of kin and relatives. In these cases the law protects patients. The patient's participation will be discussed with their consultant psychiatrist and if the consultant feels that the patient is at no risk, and that there is no evidence that they would have objected if they were able to, the patient will be included in the study.

Relatives will also be given the opportunity to object to the patient's participation and in this case the patient will then be withdrawn. An objection may be made at any time and a reason does not need to be given. Relatives are reassured that this will in no way affect the care the patient receives.

**QUESTIONNAIRE INFORMATION SHEET
FOR STAFF PARTICIPANTS.**

CONFIDENTIAL

Please would you take a few moments to complete this questionnaire.

Consider each question carefully before answering. There are examples provided for each question but these are not exhaustive. When you have decided on your answer please tell the researcher and it will be written down.

Please be reassured that the answers you give are confidential and these questionnaires will be destroyed once this project is completed. Other than for the project, no person will have access to the answers you have given.

Each person who participates is being given a reference number which will allow the researcher to identify you and the patient you are discussing. This information will not be available to anyone else and is purely for the researcher's reference purposes.

Thank you for your time.

GUIDELINES FOR HOW TO RATE RESPONSES.

**Please use these for questions 1-8.
Questions 9 and 10 are explained separately in the
supporting statements.**

YES, ALWAYS

Should be used if the behaviour in question happens on a regular basis such as daily or during every meal.

MOSTLY

Should be used if the behaviour in question happens on a regular basis, but there are occasions when it does not.

SOMETIMES

Should be used if the behaviour in question happens regularly but there are an equal number of occasions when it does not; half and half.

RARELY

Should be used if the behaviour in question happens infrequently but has been observed.

NO, NEVER

Should only be used if, to the best of your knowledge, the behaviour in question has never been observed.

SUPPORTING STATEMENTS AND EXAMPLES.
(Not all examples are necessary, just use as guidance.)

Question 1.

Does this patient have **problems** which make him/her **difficult to feed**?

Problems:

Needs persuading to sit down, needs modification to seating.

Challenging behaviour.

Drowsiness or restlessness.

Refuses to eat, clamps mouth shut, spits food out, regurgitates, chokes.

Is confused as to what is happening when being fed.

Cries, shouts or sings when being fed.

Is very slow eater.

Is very fast eater.

etc. etc.

Difficult to feed:

Need to adapt the patient's posture, hold head up/back, restrain hands.

Need to hold patient still because wriggles or slides.

Need to keep attracting patient's attention.

Difficulty getting cutlery in or out of patient's mouth.

Takes you a long time to feed patient.

etc. etc.

Question 2.

Does this patient give the impression that they are **comfortable** when being fed?

Comfortable:

Relaxed, sits back in chair, shoulders back, sits still, does not fidget or keep adjusting self.

Looks relaxed.

Does not look agitated.

etc. etc.

Question 3.

Does this patient show signs that he/she is **enjoying** the meal?

Enjoying:

Relaxed and comfortable as just discussed.

Sits back in chair

Shoulders back.

Smiles, giggles, laughs or squeals with enjoyment.

Waves arms/legs in demonstration of delight.

Does not push food away.

Eats willingly and enthusiastically.

etc. etc.

Question 4.

Is this patient able to indicate to you that he/she **likes** or **dislikes** the food?

Likes:

Able to tell you whether something is nice.

Or able to show you.

Smacks lips, runs tongue around mouth, salivates, vocalises.

etc. etc.

Dislikes:

Spits food out.

Turns away.

Refuses to open mouth.

Cries or shouts.

etc. etc.

Question 5.

Does this patient ever **choke** when eating?

Choke:

Coughs when something goes down the wrong way.

Coughs when eating.

Coughs when drinking.

Coughs on some textures.

Goes red in the face with watery eyes, sometimes without coughing.

etc. etc.

Question 6.

Does this patient ever show signs of being **tense or anxious** when they are being fed?

Tense or anxious:

Tenses muscles.

Curls up.

Turns away when trying to feed them.

Rocks, moans, cries or shouts.

Kicks out or pushes you away.

Restless, agitated or unhappy.

etc. etc.

Question 7.

Do you feel **confident** about feeding this patient?

Confident:

You do not worry at all about feeding this patient.

You are not concerned that there may be a risk associated with feeding this patient.

You feel happy and comfortable.

You do not feel concerned or anxious in any way.

You are satisfied about the amount of training you have received regarding feeding patients.

etc. etc.

Question 8.

Do you feel you are able to give **enough attention** to individuals such as this patient during meals?

Enough attention:

You have time to sit with the patient for the whole meal.

You are able to talk to them whilst they are eating.

You do not need to rush them at all and are able to go at their pace.

You do not need to keep an eye on the time.

You do not have to worry about feeding the next patient.

You do not feel rushed or under pressure when feeding patients.

etc. etc.

Question 9.

How much of the meal does this patient usually eat?

ALL OF IT

Nothing is left.

MOST OF IT

There is some left but the majority is eaten.

HALF OF IT

There is as much left as was eaten.

LESS THAN HALF

Some of the meal is eaten but the majority is left.

VERY LITTLE

The meal is hardly touched or is left completely.

Question 10.

How long does it take this patient to complete an average meal on an average day?

Please specify the length of time in minutes.

Appendix Four

INSTRUCTIONS FOR SETTING UP VIDEO CAMERA AND MAKING VIDEOS:

WHO?

The patient and member of staff feeding them.

DO NOT include any other staff or patients. Ensure that patients next to or behind participants are not in shot, and that people are not going to walk into shot.

WHAT?

The two participants, the meal and any feeding utensils need to be filmed.

Need to include any objects which either subject may reach for.

Example 1.
View when patient being
fed at table.

Example 2.
View when patient being
fed in chair.

Example 3.
View when patient being
fed in bed.

WHERE?

On the ward, wherever the patient is normally fed e.g. at the table, in a chair, in wheelchair, in bed etc. May need minor alterations to exact location within room depending on natural light. Record any changes from normal positioning.

WHEN?

During lunch-time.

WHY?

To capture interactions during mealtime on video.

HOW?

Equipment:

Video on tripod.

Separate microphone.

No lighting equipment.

One tape per partnership. i.e. do not add another session onto the end of the tape.

Distance:

Set up the video approximately 3-6 feet from the participants. This is the optimum distance for the microphone. Zoom in or out to create shot view as shown above.

Angle:

The camera angle needs to show as much of both faces as possible. The angle does not need to be square on (as in example 2 above) but can be from the side, as shown below:

Example 4.
View of shot taken from side.

Select an angle that shows an **equal amount of each subject's face**.

Light:

Ensure natural light falls on the faces of the participants.

Ensure participants are not in shadow or are silhouetted i.e. in front of a window or lamp.

Noise:

Ensure the TV or radio is turned down sufficiently that the microphone does not pick up the sound. If the patient is sitting near the phone and a phone conversation takes place, that section of tape will be discounted.

Duration:

Start the video recording once the meal has arrived on the ward and the patient has been seated or prepared for their meal. This may result in a number of minutes of film prior to the patient being fed. This is fine. Allow the tape to run for the whole meal, including drinks and dessert. Once the member of staff has left and it is clear that the meal has finished, allow the tape to run for a further two minutes before turning the video recorder off.

Appendix Five

Are you interested in doing some **conversation analysis for cash?**

I require help with transcriptions for a research project, of patients with dementia and nursing staff. I am looking for up to twelve volunteers to transcribe verbal and non-verbal interactions from video. Written guidelines and training will be given.

I will pay **£10** for each minute of tape transcribed (range of tape lengths 14 - 28.5 minutes).

For further information please contact **Rachael Henton**, Specialist Speech and Language Therapist, at Surrey Oaklands NHS Trust, on **(XXXXXX) XXXXXX**.

Dear

Thank you for telephoning and expressing an interest in being involved in the analysis stage of my research project. As we discussed I am looking for people to transcribe verbal and non-verbal behaviours from videotape. The tapes all show interactions between patients with dementia and staff during meal times.

Due to their diagnosis of dementia the patients in the study have not been able to give consent for the use of video recordings. There are therefore very stringent confidentiality clauses written into the project design, to protect them and their families. This does mean that I need a declaration of confidentiality from you before I can show you any data. Please take a few minutes to read through and sign a copy of the enclosed contract and return it to me as soon as possible, using the envelope provided. I am sorry if it sounds very formal but I have a responsibility to protect the subjects, who are otherwise very vulnerable. Likewise please do not feel 'trapped' by the contract. It will only come into effect when the data is handed over to you. You will be free to change your mind any time before that. I expect you will want more information before accepting the work anyway.

I will be arranging a date to be at the university to meet volunteers, discuss training and to hand over the videotapes. From discussions with your tutor, I realise that you are all about to be sitting exams and therefore suggest that we wait until they are out of the way. As soon as I have arranged a date I will be in touch again, but this is unlikely to be before Easter. If you wish to speak to me in the meantime please do not hesitate to call me on the above number.

I very much look forward to meeting you,

Rachael Henton

AN EXPLORATION OF THE “FEEDING PARTNERSHIP” BETWEEN PATIENTS WITH LATE STAGE DEMENTIA AND NURSING STAFF.

INFORMATION FOR STUDENTS.

The data you will be transcribing has been collected as part of a research project. The video tapes, computer disks, and all information on them remain the property of the researcher and Surrey Oaklands NHS Trust and will be returned after transcription. The tapes may not be reproduced in any form other than the transcriptions for the purpose of this study. All information, names and identities discovered during the transcription process will remain confidential and no part of the video data will be discussed outside of the research project.

The video tapes will be stored securely (e.g. do not leave the tape in the video player; do not mix it with other tapes in case it is watched by accident etc.) and will not be viewed in the presence of people who are not involved in the project. Likewise the computer disks and transcriptions will be stored securely (e.g. do not leave in the disk drive; do not leave on the screen when not being used etc.). The transcription will be saved on floppy disk only i.e. they will not be stored on the hard drive of the computers used.

The tapes will be transcribed using conversation analysis conventions and the format provided. You are being asked to produce a transcription of all verbal behaviours, and narratives of non-verbal behaviours. Training will be given and you are asked to transcribe the first minute and discuss it with the researcher prior to continuing with the whole sample. The transcription needs to be completed within two months of the data being given to you. You will be paid £10.00 for each minute of tape transcribed, so long as the whole sample is transcribed. It will not be appropriate for a sample to be divided between more than one student. Payment will be made by the university, after the video, disk and transcript have been returned to the researcher.

- I have read the information sheet provided.
- I understand that the video tape, computer disk and all information on them remain the property of the researcher and Surrey Oaklands NHS Trust, and must be returned.
- I understand that the data is confidential and may not be copied or reproduced in any format other than the requested transcription.
- I understand that any information, names, and identities discovered during the transcription process must remain confidential.
- I understand that the data or any part of the data may not be discussed outside of the research project.
- I agree to store the video tape, computer disk and transcription securely.
- I agree to work from the provided disk only and to not store data on the hard drive of my computer.
- I agree to take necessary measures to ensure that the video tape, computer disk and transcription are not viewed by people not involved in the project.
- I agree to transcribe the whole sample myself using conversation analysis conventions, following the guidelines provided.
- I agree to participate in training by transcribing the first minute of the tape for discussion with the researcher.
- I agree to complete the transcription, including the training, within two months of receiving the data.
- I understand that payment will be made, of £10.00 per minute of tape transcribed, so long as the whole sample is completed.
- I understand that payment will be made by the university, once the video tape, computer disk and completed transcript have been returned to the researcher.

I have understood and agree to all of the above.

CONVERSATION ANALYSIS TRANSCRIPTIONS.
GUIDELINES FOR STUDENTS.

COMPUTER DISK.

Getting started:

When you receive your computer disk please write your name on the bottom of the label. The disk is formatted and contains a ready made file in which to do the transcription. Just put it into your computer and click to open the file. At the top of the page you will find a summary of the subjects, length of transcript etc., as shown below. Please type in your name where it says 'transcriber'.

Subjects: Patient 'Kathy' (K) Member of staff 'Rose' (R)

Others:

Date of sample: Summer 1997

Transcription length: 1 minute, 11 seconds

Counter times: start 12:00:00 end 12:01:11

Transcriber:

Using the file:

The file contains the template for the transcription, as shown in reduced size below. To add lines to the table go into **Table** in your menu and click on **Insert rows**. If you then press **Ctrl** and **Y** simultaneously it will repeat the process. I have filled in the first counter time and the first line of the transcription. This is to help you find the right place on the tape. (Please note that my transcription is not complete and that you will need to flesh out that first line in your transcription.).

counter time (as on screen)	line no	speaker	talk	narrative patient	narrative staff	comments
Scene				is awake and sitting in chair.	Arrives with plate and an apron.	
12:00:00	001	R	Kathy Kath Kath (1) lunch time		Puts plate on arm of chair.	

THE TRANSCRIPT.

An example:

I have prepared an example of what a transcript should look like for you to use as a guide (see back 2 pages).

The template:

You will notice that the format is slightly different to the usual CA format. This is because there is a lot of non-verbal information to capture, in many cases more than there is of verbal information. This format allows all behaviours to be recorded without you needing to decide whether something is meaningful or not. That will be my job at a later date! The table contains solid lines which will help align non-verbal behaviour with speech.

Column 1: *counter reference*. In this case the video tapes include a clock in the bottom right hand corner of the screen. This is the time which needs recording. Please record the counter time, as hour-minute-seconds, at regular intervals, approximately every 15 seconds.

Column 2: *analysis markers*. You do not need to put anything in this column. However, if there is any part of the text you particularly wish to draw my attention to, place an arrow (→) in this column next to the line of interest and make comments in column 8.

Column 3: *line number*. The line numbers are three digit numbers starting at 001 (In the unlikely event that you reach 999, please continue as 1000, 1001 etc.). Each line needs a number, even if there is no speech in that line (see *columns 6 and 7* below) and there should be only one number per box.

Column 4: *speaker identifier*. Enter the speaker's initial, as given at the top of your transcript. All names are pseudonyms, but where possible the first initial is the same as the subject's real name. Only enter the other person's initials when the speaker changes. Where a pause occurs which does not belong to a particular speaker do not put either initial on that line (see *pauses* below). The next line will however need an initial, even if it is the same person as before.

Column 5: *talk*. Only have one line of talk per box, as shown below.

Column 5
When the text is too long for the box do not just let it build up in one box.

Column 5
Instead cut and paste it into the next box.

Non-verbal behaviours: In regular CA analysis you would also include a gloss of non-verbal behaviours. In this transcript the non-verbal behaviours will be kept separately (see *columns 6 and 7* below).

Vocalisations: Include all vocalisations in the talk box, putting a description in square brackets e.g. [laughs], [hums] (see lines 006 and 008 in example.).

Pauses: Pauses are usually marked in tenths of a second. Please use a stopwatch to time pauses and put the figure in brackets e.g. (0.8),

Appendix 5.5

(2.5). Pauses of less than 0.1 second should be transcribed as a full stop i.e. (.).

- **Attributable pauses:** These are pauses which belong to a speaker. They occur when a speaker expects a response, i.e. when asking a question. Instead of a response there is a pause. The pause can therefore be attributed to the second speaker. In this case mark the pause with the second speaker's initials in column 4, as below. (Often the first speaker will repeat the question or indicate the need for a response after the pause.).

Column 4	Column 5
A	how are you?
B	(2)
A	hm?

- **Non-attributable pauses / lapses:** When the talk has come to an end, and when there is no expectation of a response from the second speaker, the pause cannot be attributed to either speaker. In these instances leave column 4 empty but indicate the length of pause.

Column 4	Column 5
A	that's it
	(3)

In some of the samples these pauses in talk may stretch to minutes, but there will be lots of non-verbal behaviours to note. Continue to create new lines for all of the non-verbal behaviours but give the length of the overall pause on the first of them. See for example line 013 below where the (9) indicates a 9 second pause in talk, during which the non-verbal behaviours in lines 013 - 015 take place.

C3	Column 4	Column 5	Column 6
012	A	that's it	Picks cup up from table.
013		(9)	Holds cup in hands, 'warming' them. Looks up at B, and back to cup.
014			Takes a drink from cup and puts it back on table.
015			Looks at B.
016	A	so, now what are you going to do?	Looks away and face looks puzzled, looks back at B.
017	B	I don't know	Makes eye contact with A

Appendix 5.5

- **Word-search pause:** Do not confuse the above pauses with word-search pauses. Word-search pauses will occur within a turn and indicate processing or searching for a word. They may co-occur with fillers such as 'er' or 'um'.

Column 4	Column 5
A	that's it (0.3) the (.) erm (.) the
	(0.2) oh you know

Overlapping talk: When the first speaker's talk overlaps the talk or vocalisation of the second speaker this should be indicated with large brackets. The two speakers' utterances must be kept on separate lines and the brackets align to show exactly where they overlap (see lines 005 and 006 in example, pages 40-41).

Column 4	Column 5
A	that's the (0.3) the (.) erm (.)
	the (0.2) oh you know
B	goat do you mean?
A	[goat] yes

The large brackets can be found in the symbols menu on your computer.

Questionable instances: When you are not sure you heard something accurately put what you think was said in brackets e.g. (goat). If you cannot work it out try a phonemic representation (/gʊ:t/), or indicate the number of syllables (x).

Column 4	Column 5
A	that's the (0.3) the (.) erm (.)
	the (0.2) oh you know (1.5)
	the (goat)

Column 8
(Coat? Is possibly pointing to coat rack, but may be pointing to garden?)

You might want to put alternatives in the comments box (column 8).

Other speakers: At the top of your transcript you will see I have left space for other speakers to be added. In some cases I am aware of other speakers and have typed them in already. If an additional speaker features in your sample please note it at the top of the transcription, and use the initials X, Y and Z to indicate them in the text. (i.e. the first additional speaker will use initial X, the second initial Y etc.).

Columns 6 and 7: *Non-verbal behaviours*. Keep non-verbal behaviour separate. Include a narrative of what the patient is doing (column 6) and what the member of staff is doing (column 7). Non-verbal behaviours will occur both in the presence and absence of speech. In the former case include your narrative on the same line as the accompanying speech (lines 001 - 018 in example). In the latter case assign each consecutive behaviour a line (lines 019 - 021 in example). This allows you to indicate behaviours which happen simultaneously and those which happen successively. Keep the counter times in column 1 to show progression of behaviour. There may be long stretches where only non-verbal behaviour is recorded. You do not need to put initials in column 4 when there is no speech (see *non-attributable pauses / lapses* above.). The next time somebody does talk or vocalise, add their initial to the column, even if they were the last person to speak (see line 022 in example, pages 40-41.).

Questionable instances: When you need to make an interpretation of a behaviour, such as in line 008 of example, put your interpretation in brackets with a question mark. Underline the bit you are not sure about to make it clear.

Column 4	Column 5	Column 6
A	that's it (0.3) the (.) erm (.) the	(<u>waving</u> at window / picture ?)
	(0.2) oh you know	

Column 4	Column 5	Column 6
A	that's it (0.3) the (.) erm (.) the	(waving at <u>window / picture?</u>)
	(0.2) oh you know	

Column 8: *Comments*. Add anything else of interest and any comments you wish to make to this column.

Symbols:

There are lots of diacritics used in conversation analysis. I would like you to use the following:

[]	Use large brackets to indicate overlapping talk.
[cough]	Use small square brackets to indicate vocalisations which are not speech.
(goat)	Use regular brackets to indicate an unclear word,
(/gʊ:t/)	brackets around a phonemic transcription if you cannot make a word out,
(x)	or indicate the number of syllables (x = 1 syllable, xx = 2 syllables etc.).
(1.4)	Use for a pause, the number indicating length in seconds,
(.)	and a full stop in brackets for a pause of less than 0.1 second.
◦quiet◦	Use degree signs to indicate speech that is quieter than the rest of sample,
LOUD	or capitals if it is louder.
----- gaze	Use broken underlining to indicate that the speaker's is directed at the listener.
?	Use a question mark to indicate rising inflection.
(<u>hums?</u>) not	In the narratives use brackets around anything you are sure about. Underline the bit you are questioning.
→	Place an arrow in column 2 if you wish to draw my attention to something of particular interest, and make comments in column 8.

TRAINING:

To begin with I would like you to transcribe just the first minute of your sample, to print it out and post it to me. I can then contact you to discuss any changes you may need to make or to give you the go-ahead to continue with the sample.

PROBLEMS:

If you do run into difficulties please contact me (see below). The majority of problems have a solution, so even if it is as dire as accidentally recording over the tape or damaging the disk, please let me know. Most difficulties with the transcript should come to light during the training period, but please do not hesitate to bring problems or questions to my attention.

CONTACTING ME:

The best way to contact me is on a **Tuesday**, during the day, on **xxxxx xxxxxx**. At all other times please use my **work contact, xxxxx xxxxxx**. If I am not there you can leave a message on the machine or with my colleagues. Please be aware that I may not be able to return your call immediately as I work part-time. You can e-mail me at **xxxxxxxxxxxxxx** but please do not send any transcription data to me in this way.

Appendix Six

Statistical analysis for Chapter Four
(using the conventions of Greene and D'Oliveira (1982))

Friedman Test: Average frequency of speech units - staff members as conditions (main-meal only).

conditions	Staff member 03		Staff member 05		Staff member 06	
Subjects	Rate	Rank	Rate	Rank	Rate	Rank
Patient B	5.35	2	57.09	3	1.06	1
Patient C	2.39	2	13.49	3	2.87	1
Patient D	4.25	3	3.92	2	0.83	1
Patient E	3.28	2	16.75	3	2.21	1
Total	15.27	9	91.25	11	6.97	4
Mean	3.818		22.813		1.743	

The observed value of χ^2 is 6.5. At the 5% level this translates to a p value of 0.042 which is smaller than $p < 0.05$. There is therefore a significant difference observed between the conditions. The null hypothesis, that the differences between the frequency of speech units for the three members of staff is due to chance alone, can be rejected at the 5% level.

Appendix 6.2

Statistical analysis for Chapter Four
(using the conventions of Greene and D'Oliveira (1982))

Friedman Test: Average frequency of speech units - patients as conditions (main-meal only).

Conditions	Patient B		Patient C		Patient D		Patient E	
Subjects	Rate	Rank	Rate	Rank	Rate	Rank	Rate	Rank
Staff 03	5.35	4	2.39	1	4.25	3	3.28	2
Staff 05	57.09	4	13.49	2	3.92	1	16.75	3
Staff 06	1.06	2	1.87	3	0.83	1	2.21	4
Total	63.5	10	17.75	6	9	5	22.24	9
Mean	21.167		5.917		3		7.413	

The observed value of χ^2 is 3.4. At the 5% level this translates as a p value of 0.466 which is greater than $p < 0.05$. There is not therefore a significant difference observed between the conditions at this level.

Statistical analysis for Chapter Four

Between conditions: The observed value of F is 3.317 and the critical value of F is 3.44. Since the observed value is less than the critical value, the null hypothesis cannot be rejected at the 5% level.

Between subjects: The observed value of F is 1.848 and at the 5% level the critical value of F is 2.12. Since the observed value is less than the critical value, the null hypothesis cannot be rejected at the 5% level.

Meal summary:		
Main meal (M) =	29 mouthfuls	
Dessert (De) =	13 mouthfuls	
Drink (Dr) =	18 mouthfuls	

Comment from transcriber: It is often unclear whether M's eyes are open during this session or not. I am assuming that her eyes are open, although it is not apparent to the viewer, due to the fact that S never tells her to wake up or open her eyes whilst he is feeding her. JD.

TRANSCRIPTION OF 03/E

Subjects: Patient 'Irene (I) and Member of staff 'Simon' (S)
Others:
Sample date: 29.9.99
Transcription length: 19 minutes
Counter times: start 12.21.55 end 12.40.30
Transcriber: CS

Meal summary:	
Main meal (M) =	23 mouthfuls
Dessert (De) =	19 mouthfuls
Drink (Dr) =	21 mouthfuls

Comment from researcher: This transcript contains a lot more detail than the others. The feeding appears to be more spread-out than in other transcripts, but tracking the time references shown this to not be the case. *RH*.

TRANSCRIPTION OF 06/E

Subjects: Patient 'Irene/Mrs xx' (I) and Member of staff 'Alan' (A)
 Others: Member of staff 'Simon' (S); Member of staff (X); Camera Operator (O)
 Sample date: 20.7.99
 Transcription length: 14 minutes
 Counter times: start 12:51:30 end 13:05:30
 Transcriber: JD

Meal summary:
 Main Meal (M) = 18 mouthfuls
 Dessert (De) = 13 mouthfuls
 Drink (Dr) = 4 mouthfuls

Comment from transcriber: NO SOUND UNTIL 12:52:00. JD.

Comment from transcriber: Throughout this transcript, it is not fully apparent whether I's eyes are open all the time. However, due to the poor lighting and the comments made by A telling I to open her eyes, I am assuming that her eyes are open most of the time unless stated. Note that this problem also makes it difficult to tell when A is looking at I. JD.
