Supplements to “European Stroke Organisation Guideline on Aphasia Rehabilitation”	1
Supplement 1: Module working group members and disclosures	2
Supplement 2: List and rating of the selected outcomes for each PICO question.	3
Supplement 3: Search strategies for PICOs 1-5 and 7	7
Supplement 4: Search strategies for PICO 6	12
Supplement 5: PICO group’s definition and detailed inclusion and exclusion criteria	18
Supplement 6: Data extraction headings	21
Supplement 7: PRISMA diagram PICO 1-5 and 7	25
Supplement 8: PRISMA diagram PICO 6	26
Supplement 9: Results of PICO 1 Meta-Analyses	27
Supplement 10: Results of PICO 2 Meta-Analyses	33
Supplement 11: Results of PICO 3 Meta-Analyses	41
Supplement 12: Results of PICO 4a Meta-Analyses	47
Supplement 13: Results of PICO 4b Meta-Analyses	50
Supplement 14: Results of PICO 5a Meta-Analyses	54
Supplement 15: Results of PICO 5b Meta-Analyses	60
Supplement 16: Results of PICO 6 Meta-Analyses	61
Supplement 17: Results of PICO 7b Meta-Analyses	76
Supplement 18: GRADE profiles	77
Supplement 19: Risk of Bias at Follow up Tables	109
Supplement 20: PICO 1-7: Demographics of participants in randomised controlled comparisons eligible for inclusion.	118
Supplement 21: Results of the votes for the Expert Consensus Statements	136

Supplement 1: Module working group members and disclosures

Author	Discipline and affiliation	Intellectual and financial disclosures
Marian Brady	PhD FRCSLT Glasgow Caledonian University, Glasgow, UK	PI of the Cochrane review of SLT for Aphasia after stroke (2016), the RELEASE Collaboration papers, and co-author of Big CACTUS and Ora trials included in the Guideline.
Claire Mills (Research Fellow, non-voting member)	PhD, MRCSLT Speech & Language Therapy Department, Leeds Teaching Hospitals NHS Trust, UK Leeds Institute of Health Sciences, University of Leeds, Leeds, UK	CM is funded by a Health Education England and National Institute for Health Research (NIHR) Clinical Doctoral Research Fellowship (ICA-CDRF-2017-03-036) and an NIHR Development and Skills Enhancement Award (NIHR303777).
Hege Prag Ora (Research Fellow, non-voting member)	MD, PhD, specialist in Physical Medicine and Rehabilitation Sunnaas Rehabilitation Hospital and University of Oslo	Main author of an aphasia telerehabilitation RCT included in the guideline (Ora et al. 2020).
Natalia Novaes (Research Fellow, non-voting member)	Neurologie, Hôpital Sainte Anne, Paris, France	None.
Frank Becker	MD, PhD, specialist in Physical Medicine and Rehabilitation Sunnaas Rehabilitation Hospital and University of Oslo	PI of aphasia telerehabilitation RCT included in the guideline (Ora) Co-author of the RELEASE Collaboration papers included in this guideline. Leader of working group for Norwegian national stroke rehabilitation guidelines (Norwegian Directorate of Health)
Fofi Constantinidou	Professor of Language Disorders & Clinical Neuropsychology, University of Cyprus	None
Agnes Flöel	Department of Neurology, University Medicine Greifswald, Greifswald, Germany	None
Katharina Stibrant Sunnerhagen	Physician, Rehabilitation medicine, Professor University of Gothenburg, Sweden.	None
Jytte Isaksen	Department of Culture and Language, University of Southern Denmark, Odense, Denmark and Neurorehabilitation Research and Knowledge Centre, Rigshospitalet, Copenhagen, Denmark	None
Caroline Jagoe	Speech & Language Therapy, Department of Clinical Speech & Language Studies, Trinity College, The University of Dublin	None
Luis M.T. Jesus	School of Health Sciences, Institute of Electronics and Informatics Engineering of Aveiro and Intelligent Systems Associate Laboratory, University of Aveiro, Aveiro, Portugal	Co-author of the RELEASE Collaboration papers included in this guideline.
Paola Marangolo	Professor of Psychobiology and Psychophysiology and Neuropsychology – Department of Humanities Studies, University Federico II, Naples, Italy	None
Marcus Meinzer	Department of Neurology, University Medicine Greifswald, Ferdinand-Sauerbruch-Str.1, 17475, Greifswald, Germany	RELEASE Collaborator and PI and author of the Meinzer RCT included in this guideline and author on Flöel et al. 2011.
Ineke van der Meulen	PhD, Clinical linguist Rijndam rehabilitation centre, Rotterdam, the Netherlands and Erasmus MC, Erasmus University Medical Centre, Dep. Rehabilitation, Rotterdam, the Netherlands	Co-author of the RELEASE Collaboration papers included in this guideline.
Pauline Campbell (Non-voting member)	Methodologist, PhD. Glasgow Caledonian University, Glasgow, UK	Co-author of the Cochrane review of SLT for Aphasia after stroke (2016)
Leonard Ho (Non-voting member)	Statistician, PhD, FHEA, FRSPH, MACE. Advanced Care Research Centre (ACRC), University of Edinburgh, Edinburgh, United Kingdom	None
Salman Hussain (Non-voting member)	European Stroke Organisation, Basel, Switzerland	None
Katerina Hilari	Speech and Language Therapist; City St George's, University of London	Co-Investigator and Co-author of the RELEASE Collaboration papers and of the Efstratiadou (2019) and Marshall (2020) trials included in the guideline. Developer of the Stroke and Aphasia Quality of Life (SAQOL-39) outcome measure.

Supplement 2: List and rating of the selected outcomes for each PICO question.

PICO	Outcome	Mean (median)
PICO 1 In people with aphasia after stroke is a higher dose of speech and language therapy (SLT) (≥ 20 hours) compared to a lower dose of SLT (< 20 hours) associated with greater improvements in language, communication or quality of life?	Overall language	7 (7)
	Expressive language - spoken (e.g., naming / sentence level)	8 (8)
	Auditory comprehension	7 (7)
	Reading	6 (7)
	Writing	6 (7)
	Functional communication	8 (9)
	Communication confidence	6 (6)
	Communicative participation	7 (6)
	Psychosocial / Quality of Life	7 (7)
PICO 2 In people with aphasia after stroke is a higher intensity of SLT (≥ 3 hours per week) compared to a lower intensity of SLT (< 3 hours per week) associated with greater improvements in language, communication or quality of life?	Overall language	7 (8)
	Expressive language - spoken (e.g., naming / sentence level)	8 (8)
	Auditory comprehension	7 (7)
	Reading	6 (7)
	Writing	6 (7)
	Functional communication	8 (9)
	Communication confidence	6 (6)
	Communicative participation	7 (6)
	Psychosocial / Quality of Life	7 (7)
PICO 3 In people with aphasia after stroke is a higher frequency of SLT (≥ 4 days per week) compared to a lower frequency of SLT (< 4 days per week) associated with greater improvements in language, communication or quality of life?	Overall language	7 (8)
	Expressive language - spoken (e.g., naming / sentence level)	8 (8)
	Auditory comprehension	7 (7)

	Reading	6 (7)
	Writing	6 (7)
	Functional communication	8 (9)
	Communication confidence	6 (6)
	Communicative participation	7 (7)
	Psychosocial / Quality of Life	7 (7)
PICO 4a In people with aphasia after stroke is digitally-delivered SLT (using telerehabilitation, virtual reality therapist or similar) compared to usual in-person SLT associated with similar improvements in language, communication or quality of life?	Overall language	7 (8)
	Expressive language - spoken (e.g., naming / sentence level)	8 (8)
	Auditory comprehension	7 (7)
	Reading	6 (7)
	Writing	6 (7)
	Functional communication	8 (9)
	Communication confidence	6 (7)
	Communicative participation	7 (7)
	Psychosocial / Quality of Life	7 (7)
PICO 4b In people with aphasia after stroke is in-person SLT plus digital augmentation (using computer or tablet-based software, virtual reality or similar) compared to usual in-person SLT associated with greater improvements in language, communication or quality of life?	Overall language	7 (7)
	Expressive language - spoken (e.g., naming / sentence level)	8 (8)
	Auditory comprehension	7 (7)
	Reading	6 (7)
	Writing	7 (7)
	Functional communication	8 (9)
	Communication confidence	6 (7)
	Communicative participation	7(7)
	Psychosocial / Quality of Life	7 (7)
PICO 5a	Overall language	7 (7)

In people with aphasia after stroke is group SLT compared to one-to-one SLT associated with similar improvements in language, communication or quality of life?		
	Expressive language - spoken (e.g., naming / sentence level)	7 (7)
	Auditory comprehension	7 (7)
	Reading	5 (6)
	Writing	5 (6)
	Functional communication	8 (9)
	Communication confidence	7 (7)
	Communicative participation	8 (8)
	Psychosocial / Quality of Life	8 (8)
PICO 5b In people with aphasia after stroke is one-to-one plus group SLT compared to one-to-one SLT alone associated with greater improvements in language, communication or quality of life?	Overall language	7 (7)
	Expressive language - spoken (e.g., naming / sentence level)	7 (7)
	Auditory comprehension	7 (7)
	Reading	5 (6)
	Writing	5 (6)
	Functional communication	8 (9)
	Communication confidence	7 (7)
	Communicative participation	7 (8)
	Psychosocial / Quality of Life	8 (8)
PICO 6 a-f In people with aphasia after stroke is SLT plus tDCS compared to SLT plus sham tDCS associated with greater improvements in language and communication with no changes to safety?	Overall language	8 (9)
	Expressive language - spoken (e.g., naming / sentence level)	8 (8)
	Auditory comprehension	7 (7)
	Reading	6 (7)
	Writing	6 (7)
	Functional communication	8 (8)
	Communication confidence	6 (6)

	Communicative participation	6 (6)
	Psychosocial / Quality of Life	6 (7)
PICO 7a In people with aphasia after stroke is individually-tailored SLT by functional relevance compared to non-tailored SLT associated with greater improvements in language, communication or quality of life?	Overall language	7 (8)
	Expressive language - spoken (e.g., naming / sentence level)	7 (7)
	Auditory comprehension	7 (7)
	Reading	6 (7)
	Writing	6 (7)
	Functional communication	9 (9)
	Communication confidence	6 (7)
	Communicative participation	7 (7)
	Psychosocial / Quality of Life	7 (7)
PICO 7b In people with aphasia after stroke is individually-tailored SLT by level of language task difficulty, compared to non-tailored SLT associated with greater improvements in language, communication or quality of life	Overall language	7 (8)
	Expressive language - spoken (e.g., naming / sentence level)	8 (8)
	Auditory comprehension	7 (7)
	Reading	6 (7)
	Writing	6 (7)
	Functional communication	8 (9)
	Communication confidence	6 (7)
	Communicative participation	7 (7)
	Psychosocial / Quality of Life	7 (7)

PICO	Definition	Inclusion criteria/ Exclusion criteria
PICOs 1-3 Dose, Intensity, Frequency of the SLT	Dose: total number of hours of intervention Intensity: number of intervention hours per week Frequency: number of intervention days per week.	<u>Inclusion:</u> Does the intervention in one arm differ in terms of dose or intensity or frequency from the intervention in the other arm(s)?
PICO 4a Digital SLT versus in- person SLT	Studies that compare an intervention group with people with aphasia after stroke receiving fully digitally delivered SLT (e.g. telerehabilitation, computer-based aphasia therapy, SLT apps) with a control group receiving in-person SLT.	Intervention <u>Inclusion:</u> - Any form of digital deliverance of SLT. <u>Exclusion:</u> - Any intervention not delivered fully digital. - Digital tools that do not concern treatment (e.g software/apps to facilitate communication). Comparator <u>Inclusion:</u> - Any in-person SLT intervention not using digital intervention. <u>Exclusion:</u> - Any form of digital deliverance of SLT.
PICO 4b Digitally- augmented SLT versus SLT	Studies that compare an intervention group with people with aphasia after stroke receiving any combination of in-person SLT and digitally delivered SLT (e.g. telerehabilitation, computer-based aphasia therapy, SLT apps) with a control group receiving only in-person SLT	Intervention <u>Inclusion:</u> - any form of SLT using both in-person SLT and digital augmentation <u>Exclusion:</u> - interventions where the in-person contact/digital augmentation does not concern treatment (treatment meaning direct treatment sessions or feedback on digital training performance and digital training planning) Comparator <u>Inclusion:</u>

		- Any in-person SLT intervention not using digital intervention <u>Exclusion:</u> - Any form of digital intervention
PICO 5a Group SLT versus one-to-one SLT	Studies that compare people with aphasia after stroke receiving any form of sole group SLT with two or more people with aphasia (≥ 2 PWA) with a control group receiving only one-to-one SLT.	Intervention <u>Inclusion:</u> - Any form of group SLT with two or more people with aphasia (≥ 2 PWA). - Participants interact with each other in therapy task and conversation. <u>Exclusion:</u> - Any form of one-to-one SLT. Comparator <u>Inclusion:</u> - Any one-to-one SLT intervention <u>Exclusion:</u> - Any form of group SLT
PICO 5b One-to-one plus group SLT versus one-to-one SLT	Studies that compare people with aphasia after stroke receiving any form and combination of one-to-one plus group SLT (≥ 2 PWA) with a control group receiving only one-to-one SLT.	Intervention <u>Inclusion:</u> - Any form of one-to-one SLT together with group therapy <u>Exclusion:</u> - Only one-to-one SLT - Only group SLT Comparator <u>Inclusion:</u> - Any one-to-one SLT intervention delivered alone <u>Exclusion:</u> - Any form of group SLT or one-to-one therapy together with group SLT.
PICO 6 a-f SLT augmented with tDCS brain stimulation versus SLT plus control condition	Brain stimulation: transcranial direct current stimulation, tDCS. Control condition: accepted control conditions comprise: placebo (sham) stimulation, including, e.g., intensity < 0.3 mA for tDCS; 30s stimulation only for tDCS; or otherwise	<u>Inclusion:</u> - Does the intervention in one arm offer SLT plus brain stimulation, in the other arm(s) SLT plus control condition? <u>Exclusion:</u> - Stimulation techniques other than tDCS

	ineffective type of stimulation; active stimulation sites outside of the target network.	
PICO 7a Tailoring according to functional relevance	Studies that compare people with aphasia after stroke receiving a tailored and individualized intervention according to functional relevance (e.g. situational/words/materials) compared to a control group with a non-tailored intervention.	<u>Inclusion:</u> - Do the individuals in the intervention group have a tailored and individualised intervention by functional relevance e.g. situational/words/materials used? - Control group should have a non-tailored intervention.
PICO 7b Tailoring according to level of difficulty	Studies that compare people with aphasia after stroke receiving a tailored, individualised, or titrated intervention according to level of language difficulty (e.g. nouns with different frequency of use/nouns from one semantic category/concrete vs abstract nouns/pictures vs line drawings/complexity of concepts) compared to a control group with a non-tailored intervention.	<u>Inclusion:</u> - Do the individuals in the intervention group have a tailored, individualized, or titrated intervention according to level of language difficulty e.g. nouns with different frequency of use/nouns from one semantic category/concrete vs abstract nouns/pictures vs line drawings/complexity of concepts? - Control group should have a non-tailored intervention.

Supplement 6: Data extraction headings

PICOs 1, 2, 3, 4a, 4b, 5a, 5b, 7a, 7b:

- Trial label
- Reviewer
- Study design
- PICO Group:
 - 1 – Dose
 - 2 – Intensity
 - 3 – Frequency
 - 4a – Digital versus in-person
 - 4b – Digitally augmented versus SLT
 - 5a – Group vs SLT
 - 5b – One-to-one plus group SLT
 - 7a – Functional relevance
 - 7b – Level of difficulty
- Participant Demographics:
 - Total randomised participants (n)
 - Age (years)
 - Sex (% male)
 - Stroke type (% ischaemic)
 - Time post-stroke at baseline (days)
 - Aphasia severity at baseline
 - Intervention 1:
 - Short Label
 - Short description
 - Participants (n)
 - Dose (total SLT hours)
 - Intensity (hours per week)
 - Frequency (days per week)
 - Only digitally delivered (if yes add details)
 - Digitally augmented (if yes add details)
 - In-person SLT (y/n)
 - Group SLT (y/n)
 - One-to-one SLT (y/n)

PICO 5a. Functional communication follow up

PICO 5a. Functional Communication follow-up (sensitivity analysis COMPARE Scenario data)

PICO 5a. Quality of life follow up

PICO 5a. Overall language follow up

PICO 5a. Expressive language - naming follow up

PICO 5a. Auditory comprehension follow up

Supplement 15: Results of PICO 5b Meta-Analyses

PICO 5b. Expressive language ±naming

PICO 5b. Emotional and social wellbeing (mood)

Supplement 16: Results of PICO 6 Meta-Analyses

PICO6 a. Left Hemisphere tDCS (Anodal) plus SLT versus Sham tDCS plus SLT

PICO 6a. Overall language

PICO 6a. Expressive language ±naming (nouns)

PICO 6a. Expressive language - naming (verbs)

PICO 6a. Auditory Comprehension

PICO 6a. Adverse events ±pain

PICO 6a. Reported side effects

PICO 6a. Functional communication ±change scores

PICO 6a. Follow-up Left Hemisphere tDCS (anodal) plus SLT versus Sham tDCS plus SLT

PICO 6a. Functional communication follow up

PICO 6a. Quality of life follow up

PICO 6a. Overall language ability follow-up

PICO 6a. Expressive language - naming (general) follow-up

PICO 6a. Expressive language - naming (verbs) follow-up

PICO 6a. Auditory comprehension follow up

PICO 6a. Functional communication ±change from baseline score follow-up (6 months)

PICO 6b. Left Hemisphere tDCS (Cathodal) plus SLT versus Sham tDCS plus SLT

PICO 6b. Overall language

PICO 6b. Side effects

PICO 6b. Follow-up Left Hemisphere tDCS (Cathodal) plus SLT versus Sham tDCS plus SLT

PICO 6b. Functional Communication follow-up

PICO 6b. Overall language follow-up

PICO 6c. Right Hemisphere tDCS (Anodal) and SLT (reference on contralateral frontopolar cortex) versus Sham tDCS and SLT

PICO 6c. Expressive language - naming (nouns)

PICO 6c. Expressive language naming (verbs)

PICO 6d. Right Hemisphere tDCS (Cathodal) + SLT vs Sham tDCS + SLT

PICO 6d. Overall Language

PICO 6d. Expressive language - naming (nouns)

PICO 6d. Auditory comprehension

PICO 6d. Adverse events

PICO 6d. Reported side effects

PICO 6e. Cerebellum tDCS (Anodal or Cathodal) and SLT versus Sham tDCS and SLT

PICO 6e. Expressive language - naming (nouns)

PICO 6e. Adverse Event - Pain

PICO 6e. Expressive language - naming (nouns) follow-up

PICO 6f. Individualised Left Hemisphere tDCS (anodal or cathodal) plus SLT versus Sham tDCS plus SLT

PICO 6f. Overall language

PICO 6f. Overall language follow-up

Supplement 17: Results of PICO 7b Meta-Analyses

PICO 7b. Overall Language

PICO 7b. Expressive language ±naming

PICO 7b. Auditory comprehension

Supplement 18: GRADE profiles

Table 1. GRADE evidence profile for PICO 1

In people with aphasia after stroke is a higher dose of speech and language therapy (SLT) (> or = to 20 hours) compared to a lower dose of SLT (< 20 hours) associated with greater improvements in language, communication or quality of life?

Certainty assessment							< R I S D U W L F L S D		Absolute Effect		Certainty	Importance

Explanations

- a. Evidence downgraded by 1 due to serious risk of bias. Selection bias (randomisation) was low risk of bias in all studies and low risk of bias for allocation concealment in 3 studies and unclear risk of bias in 1 study; Performance bias was judged as high risk of bias in all studies; Detection bias was low risk of bias in 3 studies and unclear risk of bias in 1 study; Selective bias was judged as low risk of bias in 3 studies and high risk of bias in 1 study; Other types of bias: 1 study was judged as low risk of bias and unclear risk of bias in 3 studies.
- b. Evidence downgraded by 1 due to serious inconsistency ($I^2 = 61\%$)
- c. Evidence downgraded by 1 due to serious risk of bias. Selection bias (randomisation and allocation concealment) was low risk of bias in both studies; Performance bias was judged as high risk of bias in both studies; Detection bias, attrition bias and reporting bias was low risk of bias in both studies; Other types of bias was judged as unclear risk of bias in both studies.
- d. Evidence downgraded by 1 due to serious risk of imprecision (wide confidence intervals and modest sample size).
- e. Evidence downgraded by 1 due to serious risk of bias. Selection bias (randomisation and allocation concealment) was low risk of bias; Performance bias was judged as high risk of bias; Detection bias, attrition bias and reporting bias was judged as low risk of bias; Other types of bias was judged as unclear risk of bias.
- f. Evidence downgraded by 1 due to indirectness as participants in this trial were in the acute stage of recovery and trialists report that “spontaneous recovery” could not be ruled out.
- g. Evidence downgraded by 1 due to serious risk of imprecision (wide confidence intervals and modest sample size).
- h. Evidence downgraded by 1 due to serious risk of bias. Selection bias (randomisation and allocation concealment) low risk of bias in all studies; Performance bias: high risk of bias in all studies; Detection bias, attrition bias and reporting bias: low risk of bias in all studies; Other types of bias: low risk of bias in one study and unclear risk of bias in two studies.
- i. Evidence downgraded by 1 due to serious inconsistency ($I^2=75\%$)

Table 2. GRADE evidence profile for PICO 1 (at follow-up)

In people with aphasia after stroke is a higher dose of speech and language therapy (SLT) (> or = to 20 hours) compared to a lower dose of SLT (< 20 hours) associated with greater improvements in language, communication or quality of life?

*follow-up after a period of no treatment post-therapy

Explanations

- a. Evidence downgraded by 1 due to risk of bias. Selection bias (randomisation): low risk of bias in all studies, and low risk of bias for allocation concealment in 2 studies and unclear risk of bias in 1 study; Performance bias: high risk of bias in all studies; Detection bias: low risk of bias in 2 studies and unclear risk of bias in 1 study; Attrition bias: low risk of bias in all studies; Selective reporting: low risk of bias in 2 studies and high risk of bias in 1 study; Other types of bias: low risk of bias in 1 study and unclear risk of bias in 2 studies.

- b. Evidence downgraded by 1 due to inconsistency (wide confidence intervals and modest sample size).
- c. Evidence downgraded by 1 due to risk of bias. Single-blinded trial; Unclear risk of bias as groups were not comparable at baseline (usual care arm had participants who were more independent, younger, no participants with severe aphasia and high discourse and naming scores).
- d. Evidence downgraded by 1 due to imprecision (wide confidence intervals and modest sample size).
- e. Evidence downgraded by 1 due to risk of bias. Selection bias (randomisation and allocation concealment): low risk of bias in both studies; Performance bias: high risk of bias in both studies; Low risk of bias in both studies for detection bias, attrition bias and selective reporting; Other types of bias: low risk of bias in 1 study and unclear risk of bias in 1 study.
- f. Evidence downgraded by 1 due to imprecision (wide confidence intervals and modest sample size).

Table 3. GRADE evidence profile for PICO 2

In people with aphasia after stroke is a higher intensity of SLT (> or = to 3 hours per week) compared to a lower intensity of SLT (< 3 hours per week) associated with greater improvements in language, communication or quality of life?

CI: confidence interval; **MD:** mean difference; **RPC:** randomised paired comparisons; **SMD:** standardised mean difference

Explanations

- a. Evidence downgraded by 1 due to serious risk of bias. Selection bias (randomisation): low risk of bias in all studies; Selection bias (allocation concealment): low risk of bias in 6 studies and unclear risk of bias in 1 study; Performance bias: high risk of bias in all studies; Detection bias: low risk of bias in all studies; Attrition bias: judged as low risk of bias in 6 studies and high risk of bias in 1 study; Reporting bias: low risk of bias in 6 studies and unclear risk of bias in 1 study; Other types of bias: low risk of bias in 2 studies and unclear risk of bias in 5 studies.

- b. Evidence downgraded by 1 due to risk of serious inconsistency ($I^2 = 51\%$)
- c. Evidence downgraded by 1 due to serious risk of bias. Selection bias (randomisation): low risk of bias in all studies; Selection bias (allocation concealment): low risk of bias in 4 studies and unclear risk of bias in 1 study; Performance bias: high risk of bias in all studies; Detection bias and Attrition bias: judged as low risk of bias all studies; ; Reporting bias: judged as low risk of bias in 4 studies and unclear risk of bias in 1 study; Other types of bias: unclear risk of bias in 4 studies.
- d. Heterogeneity ($I^2=31\%$) judged as not serious
- e. Evidence downgraded by 1 due to serious risk of bias. Selection bias (randomisation): low risk of bias in all studies; Selection bias (allocation concealment): low risk of bias in 3 studies and unclear risk of bias in 1 study. Performance bias: high risk of bias in all studies; Detection bias and Attrition bias: low risk of bias in all studies; Reporting bias: low risk of bias in 3 studies and unclear risk of bias in 1 study. Other sources of bias: unclear risk of bias in all studies.
- f. Evidence downgraded by 1 due to serious risk of inconsistency ($I^2=72\%$)
- g. Evidence downgraded by 1 due to serious risk of bias. Selection bias (randomisation): low risk of bias in all studies; Selection bias (allocation concealment): low risk of bias in 4 studies and unclear risk of bias in 1 study; Performance bias: high risk of bias in all studies; Detection bias and attrition bias: judged as low risk of bias in all studies; Reporting bias: judged as low risk of bias in 4 studies and unclear risk of bias in 1 study; Other types of bias: low risk of bias in 1 study and unclear risk of bias in 4 studies.
- h. Evidence downgraded by 1 due to serious risk of inconsistency ($I^2=63\%$)
- i. Evidence downgraded by 1 due to serious risk of bias. Selection bias (randomisation and allocation concealment): low risk of bias in all studies; Performance bias: high risk of bias in all studies; Detection bias: low risk of bias in 2 studies and unclear risk of bias in 1 study; Attrition bias and selective reporting bias: low risk of bias in both studies; Other types of bias: low risk of bias in 1 study and unclear risk of bias in 1 study.
- j. Evidence downgraded by 1 due to serious risk of serious imprecision (modest sample size).
- k. Evidence downgraded by 1 due to risk of bias. Selection bias (randomisation and allocation concealment): low risk of bias in all studies; Performance bias: high risk of bias in all studies; Detection bias and Attrition bias: low risk of bias in all studies; Reporting bias: low risk of bias in 3 studies and unclear risk of bias in 1 study; Other types of bias: low risk of bias in 1 study and unclear risk of bias in 3 studies.
- l. Evidence downgraded by 1 due to serious risk of inconsistency ($I^2=63\%$)

Table 4. GRADE evidence profile for PICO 2 (follow-up),

In people with aphasia after stroke is a higher intensity of SLT (> or = to 3 hours per week) compared to a lower intensity of SLT (< 3 hours per week) associated with greater improvements in language, communication or quality of life?

CI: confidence interval; MD: mean difference; RPC: randomised paired comparisons; SMD: standardised mean difference

Explanations

- a. Evidence downgraded by 1 due to serious risk of bias. Both studies were single-blinded trials; High risk of bias for attrition bias in one study; Reporting bias: unclear risk of bias in one study; Other bias judged as unclear risk of bias in one study and high risk of bias in one study as groups were not comparable at baseline.
- b. Evidence downgraded by 1 due to risk of serious imprecision (modest sample size)
- c. Evidence downgraded by 1 due to serious inconsistency ($I^2=57\%$)
- d. Evidence downgraded by 1 due to serious risk of bias. Randomisation (sequence generation and allocation concealment): low risk of bias; Performance bias: high risk of bias; Detection bias, attrition bias and reporting bias: low risk of bias; Other types of bias: unclear risk of bias .
- e. Evidence downgraded by 1 due to serious risk of serious imprecision (modest sample size).
- f. Evidence downgraded by 1 due to serious risk of bias. Single-blinded trial; High risk of bias for attrition bias; Reporting bias: unclear risk of bias; Other bias: high risk of bias as the two groups were not well-matched for aphasia severity, type and time post-onset at baseline.
- g. Evidence downgraded by 2 due to risk of very serious imprecision (wide confidence intervals and small sample size).
- h. Evidence downgraded by 1 due to serious risk of bias. Randomisation (sequence generation and allocation concealment): low risk of bias in both studies; Performance bias: high risk of bias in both studies; Detection bias and attrition bias: low risk of bias in both studies; Selective reporting bias: low risk of bias in 1 study and unclear risk of bias in 1 study; Other types of bias: low risk of bias in 1 study and unclear risk of bias in 1 study
- i. Evidence downgraded by 1 due to serious risk of serious imprecision (modest sample size).

Table 6. GRADE evidence profile for PICO 3 (follow-up)

In people with aphasia after stroke is a higher frequency of SLT (> or = to 4 days per week) compared to a lower frequency of SLT (< 4 days per week) associated with greater improvements in language, communication or quality of life?

Explanations

- Evidence downgraded by 1 due to risk of bias. Selection bias (randomisation and allocation concealment): low risk of bias in both studies; Performance bias: High risk of bias in both studies; Attrition bias: low risk of bias in one study and unclear risk of bias in one study; Selective reporting: low risk of bias in both studies; Other types of bias: unclear risk of bias in both studies.
- Evidence downgraded by 1 due to imprecision (wide confidence intervals and modest sample size).
- Evidence downgraded by 1 due to risk of bias. Selection bias (randomisation and allocation concealment): low risk of bias; Performance bias: high risk of bias; Detection bias, attrition bias and selective reporting: low risk of bias; Other types of bias: unclear risk of bias.
- Evidence downgraded by 2 due to imprecision (wide confidence intervals and small sample size).
- Evidence downgraded by 1 due to risk of bias. Selection bias (randomisation): low risk of bias; Selection bias (allocation concealment): unclear risk of bias; Performance bias: high risk of bias; Detection bias: low risk of bias; Attrition bias: high risk of bias; Selective reporting: low risk of bias; Other types of bias: unclear risk of bias.
- Evidence downgraded by 2 due to imprecision (wide confidence intervals and small sample size).

Explanations

a. Evidence downgraded by 1 due to serious risk of bias. Selection bias (randomisation): low risk of bias in 4 studies, and unclear risk of bias in 2 studies; Selection bias (allocation concealment): low risk of bias in 2 studies and unclear risk of bias in 4 studies; Performance bias: unclear risk of bias in 1 study and high risk of bias in 5 studies; Detection bias: low risk of bias in all studies; Attrition bias: low risk of bias in 5 studies and high risk of bias in 1 study; Reporting bias: low risk of bias in 5 studies and unclear risk of bias in 1 study; Other types of bias: low risk of bias in 1 study, unclear risk of bias in 4 studies and high risk of bias in 1 study.

- b. Evidence downgraded by 1 due to risk of serious imprecision (wide confidence intervals and modest sample size).
- c. Evidence downgraded by 1 due to serious risk of bias. Selection bias (randomisation and allocation concealment): unclear risk of bias; Performance bias: high risk of bias; Detection bias: low risk of bias; Attrition bias: high risk of bias; Reporting bias and other types of bias: unclear risk of bias.
- d. Evidence downgraded by 2 due to risk of serious imprecision (wide confidence intervals and small sample size).
- e. Evidence downgraded by 1 due to serious risk of bias: Selection bias (randomisation): low risk of bias in all studies; Selection bias (allocation concealment): low risk of bias in 2 studies and unclear risk of bias in 1 study; Performance bias: unclear risk of bias in 1 study, and high risk of bias in 2 studies; Detection bias: low risk of bias in 2 studies and unclear risk of bias in 1 study; Attrition bias and Reporting bias: low risk of bias in all studies; Other types of bias: low risk of bias in 1 study, unclear risk of bias in 1 study and high risk of bias in 1 study.
- f. Evidence downgraded by 1 due to risk of serious imprecision (wide confidence intervals and modest sample size).
- g. Evidence downgraded by 1 due to serious risk of bias: Selection bias (randomisation): low risk of bias in 3 studies and unclear risk of bias in 1 study; Selection bias (allocation concealment): low risk of bias in 2 studies and unclear risk of bias in 2 studies; Performance bias: high risk of bias in 3 studies and unclear risk of bias in 1 study; Detection bias: low risk of bias in 3 studies and unclear risk of bias in 1 study; Attrition bias: low risk of bias in 3 studies and high risk of bias in 1 study; Reporting bias: low risk of bias in 3 studies and unclear risk of bias in 1 study; Other types of bias: low risk of bias in 1 study, unclear risk of bias in 2 studies and high risk of bias in 1 study.
- h. Evidence downgraded by 1 due to risk of serious imprecision (wide confidence intervals and modest sample size).
- i. Evidence downgraded by 1 due to serious risk of bias: Selection bias (randomisation): low risk of bias in 3 studies and unclear risk of bias in 1 study; Selection bias (allocation concealment): low risk of bias in 2 studies and unclear risk of bias in 2 studies; Performance bias: high risk of bias in 2 studies and unclear risk of bias in 2 studies; Detection bias: low risk of bias in 3 studies and unclear risk of bias in 1 study; Attrition bias: low risk of bias in 3 studies and high risk of bias in 1 study; Reporting bias: low risk of bias in 3 studies and unclear risk of bias in 1 study; Other types of bias: low risk of bias in 2 studies and unclear risk of bias in 2 studies.
- j. Evidence downgraded by 1 due to serious risk of bias. Selection bias (randomisation and allocation concealment): low risk of bias in both studies; Performance bias: high risk of bias in both studies; Detection bias, attrition bias and selective reporting: low risk of bias in both studies; Other types of bias: unclear risk of bias in both studies.
- k. Evidence downgraded by 1 due to risk of serious imprecision (modest sample size).

Explanations

- Evidence downgraded by 1 due to serious risk of bias. Selection bias (randomisation): low risk of bias in 3 studies, and unclear risk of bias in 1 study; Selection bias (allocation concealment): low risk of bias in 2 studies and unclear risk of bias in 2 studies; Performance bias: high risk of bias in 3 studies and unclear risk of bias in 1 study; Detection bias, attrition bias and selective reporting: low risk of bias in all studies; Other types of bias: low risk of bias in 1 study and unclear risk of bias in 3 studies.
- Evidence downgraded by 1 due to risk of serious inconsistency ($I^2 = 74\%$).
- Evidence downgraded by 1 due to risk of serious imprecision (modest sample size).
- Evidence downgraded by 1 due to serious risk of bias. Single-blinded trial; Unclear risk of bias as groups were not comparable at baseline (usual care arm had participants who were more independent, younger, no participants with severe aphasia and high discourse and naming scores).
- Evidence downgraded by 1 due to risk of serious imprecision (modest sample size).

- f. Evidence downgraded by 1 due to serious risk of bias. Selection bias (randomisation): low risk of bias in both studies; Selection bias (allocation concealment): low risk of bias in 1 study and unclear risk of bias in 1 study; Performance bias: unclear risk of bias in 1 study and high risk of bias in 1 study; Detection bias, attrition bias and reporting bias: low risk of bias in both studies; Other types of bias: low risk of bias in 1 study and unclear risk of bias in 1 study.
- g. Evidence downgraded by 1 due to risk of serious imprecision (modest sample size).
- h. Evidence downgraded by 1 due to serious risk of bias. Selection bias (randomisation and allocation concealment): low risk of bias in both studies; Performance bias: high risk of bias in both studies; Detection bias, attrition bias and selective reporting: low risk of bias in both studies; Other types of bias: unclear risk of bias in both studies
- i. Evidence downgraded by 1 due to risk of serious imprecision (modest sample size).

Explanations

- Evidence downgraded by 1 due to serious risk of bias. Selection bias (randomisation and allocation) was low risk of bias in 3 studies and unclear risk of bias in 2 studies. Performance bias was low risk of bias in 3 studies and unclear risk of bias in 2 studies. Detection bias was low risk of bias in 5 studies. Attrition bias was low risk of bias in 3 studies and unclear risk of bias in 2 studies. Selective reporting bias was unclear risk of bias in 4 studies and high risk of bias in 1 study. Other types of bias were judged as low risk of bias in 3 studies and unclear risk of bias in 2 studies.
- Evidence downgraded by 1 due to risk of serious imprecision (modest sample size)
- Evidence downgraded by 1 due to serious risk of bias. Selection bias (randomisation and allocation) was low risk of bias in 3 studies and unclear risk of bias in 4 studies. Performance and detection bias was low risk of bias in 6 studies and unclear risk of bias in 1 study. Attrition bias was low risk of bias in 5 studies and unclear risk of bias in 2 studies. Selective reporting was unclear risk of bias in 6 studies and high risk of bias in 1 study. Other types of bias was low risk of bias in 6 studies and unclear risk of bias in 1 study.
- Evidence downgraded by 1 due to serious risk of bias. Selection bias (randomisation and allocation) was unclear risk of bias in both studies. Performance bias was low risk of bias in both studies. Detection bias was low risk of bias in 1 study and unclear risk of bias in 1 study. Attrition bias was low risk of bias in both studies. Selective reporting bias was unclear risk of bias in both studies. Other types of bias were judged as low risk of bias in both studies.
- Evidence downgraded by 2 due to risk of very serious imprecision (**wide confidence intervals** and small sample size)
- Evidence downgraded by 1 due to serious risk of bias. Selection bias (randomisation and allocation) was low risk of bias in 2 studies and unclear risk of bias in 3 studies. Performance and detection bias was low risk of bias in 4 studies and unclear risk of bias in 1 study. Attrition bias was low risk of bias in 3 studies and unclear risk of bias in 2 studies. Selective reporting was unclear risk of bias in 4 studies and high risk of bias in 1 study. Other types of bias was judged as low risk of bias in 4 studies and unclear risk of bias in 1 study.
- Evidence downgraded by 1 due to serious risk of bias. Selection bias (randomisation) was low risk of bias in 3 studies and unclear risk of bias in 2 studies. Selection bias (allocation concealment) was low risk of bias in 2 studies and unclear risk of bias in 3 studies. Performance bias was low risk of bias in 3 studies and unclear risk of bias in 2 studies. Detection bias was low risk of bias in all studies. Attrition bias was low risk of bias in 3 studies and unclear risk of bias in 2 studies. Selective reporting bias was unclear risk of bias in 4 studies and high risk of bias in 1 study. Other types of bias were judged as low risk of bias in 2 studies and unclear risk of bias in 3 studies.
- Evidence downgraded by 1 due to serious risk of bias. Selection bias (randomisation and allocation concealment) was unclear risk of bias. Performance bias, detection bias, attrition bias, selective reporting bias and other types of bias were judged as low risk of bias.
- Evidence downgraded by 1 due to serious risk of bias. Selection bias (randomisation) was low risk of bias in 3 studies and unclear risk of bias in 1 study. Selection bias (allocation concealment) was low risk of bias in 2 studies and unclear risk of bias in 2 studies. Performance bias, detection bias and attrition bias were low risk in all 4 studies. Selective reporting bias was unclear risk of bias in all 4 studies. Other types of bias were judged as low risk of bias in 3 studies and unclear risk of bias in 1 study.
- Evidence downgraded by 1 due to serious risk of bias. Selection bias (randomisation and allocation concealment) was unclear risk of bias. Performance bias, detection bias, attrition bias and other types of bias were judged as low risk of bias. Selective reporting bias was judged as unclear risk of bias.
- Evidence downgraded by 1 due to serious risk of bias. Selection bias (randomisation) was low risk of bias in 4 studies and unclear risk of bias in 1 study. Selection bias (allocation concealment) was low risk of bias in 3 studies and unclear risk of bias in 2 studies. Performance bias was low risk of bias in 4 studies and unclear risk of bias in 1 study. Detection bias was low risk of bias in all 5 studies. Attrition bias was low risk of bias in 4 studies and unclear risk of bias in 1 study. Selective reporting bias was unclear risk of bias in 4 studies and high risk of bias in 1 study. Other types of bias were judged as low risk of bias in 2 studies and unclear risk of bias in 3 studies.
- Evidence downgraded by 1 due to serious risk of bias. Selection bias (randomisation and allocation): unclear risk of bias; Performance and detection bias: low risk of bias; Attrition bias: unclear risk of bias; Selective reporting: high risk of bias; Other types of bias: low risk of bias.

CI: confidence interval; MD: mean difference; OR: odds ratio; SMD: standardised mean difference

Explanations

- Evidence downgraded by 1 due to serious risk of bias. Selection bias (randomisation and allocation concealment): unclear risk of bias in 2 studies. Performance bias: low risk of bias in 1 study and unclear risk of bias in 1 study; Detection bias: low risk of bias in 2 studies; Attrition bias: low risk of bias in 1 study and unclear risk of bias in 1 study; Selective reporting bias: low risk of bias in 1 study and unclear risk of bias in 1 study and Other types of bias: low risk of bias in 2 studies.
- Evidence downgraded by 1 due to risk of serious inconsistency ($I^2 = 58\%$)
- Evidence downgraded by 1 due to risk of serious imprecision (wide confidence intervals and small sample size)
- Evidence downgraded by 1 due to serious risk of bias. Selection bias (randomisation and allocation concealment): unclear risk of bias. Performance bias: unclear risk of bias; Detection bias: low risk of bias; Attrition bias and selective reporting: unclear risk of bias; Other types of bias: low risk of bias.

CI: confidence interval; **MD:** mean difference; **SMD:** standardised mean difference

Explanations

- Evidence downgraded by 1 due to serious risk of bias. Selection bias: low risk for randomisation but insufficient information about allocation concealment; Performance bias: high risk of bias as not possible to blind participants and personnel; Detection bias: Unclear risk of bias as insufficient information about blinding of outcome assessors; All other criteria (attrition bias, reporting bias, and other types of bias) judged as low risk of bias
- Evidence downgraded by 2 due to risk of very serious imprecision (small sample size).

Supplement 19: Risk of Bias at Follow up Tables

PICO 1 Risk of bias:

In people with aphasia after stroke is a higher dose of SLT • K R X U V compared to a lower dose of SLT (< 20 hours) associated with greater improvements in language, communication, or quality of life?

Figure 1. Risk of bias profile for studies included in PICO 1 (follow-up) analysis.

		Risk of bias

		D1: Random sequence generation D2: Allocation concealment D3: Blinding of participants and personnel D4: Blinding of outcome assessment D5: Incomplete outcome data D6: Selective reporting D7: Other sources of bias						
		Judgement X High - Unclear + Low Not applicable						

PICO 3 Risk of bias:

In people with aphasia after stroke is a higher frequency of SLT (> or = 4 days per week) compared to a lower frequency of SLT (< 4 days per week) associated with greater improvements in language, communication or quality of life?

Figure 3. Risk of bias profile for studies included in PICO 3 (follow-up) analysis.

PICO 4a Risk of bias:

In people with aphasia after stroke is digitally-delivered SLT (using telerehabilitation, virtual reality therapist or similar) compared to usual in-person SLT associated with similar improvements in language, communication or quality of life?

Figure 4. Risk of bias profile for studies included in PICO 4a (follow-up) analysis.

PICO 4b Risk of bias:

In people with aphasia after stroke is in-person SLT plus digital augmentation (using computer or tablet-based software, virtual reality or similar) compared to usual in-person SLT associated with greater improvements in language, communication or quality of life?

Figure 5. Risk of bias profile for studies included in PICO 4b (follow-up) analysis

PICO 5a Risk of bias

In people with aphasia after stroke is group SLT compared to one-to-one SLT associated with similar improvements in language, communication or quality of life?

Figure 6. Risk of bias profile for studies included in PICO 5a (follow-up) analysis.

PICO 5b Risk of bias

In people with aphasia after stroke is one-to-one plus group SLT compared to one-to-one SLT alone associated with greater improvements in language, communication, or quality of life?

Figure 7. Risk of bias profile for studies included in PICO 5b

PICO 6 Risk of bias

In people with aphasia after stroke is SLT plus tDCS compared to SLT plus sham tDCS associated with greater improvements in language, communication and safety?

Figure 8. Risk of bias profile for studies included in PICO 6b

Figure 9. Risk of bias profile for studies included in PICO 6c

Northstar 2020	43 (of 63) relevant to PICO	C-tDCS right hemisphere versus S-tDCS	26/17	<u>C-tDCS</u> : 65.3 (13.2) <u>S-tDCS</u> : 67.4 (11.7)	<u>C-tDCS</u> : 20.4 (14.7) days <u>S-tDCS</u> : 15.9 (11.2) days	Unified Aphasia Score[‡]: <u>C-tDCS</u> : 45.2 (22.6) <u>S-tDCS</u> : 38.5 (26.7)

N = participants relevant to the PICO; *Crossover RCT data extracted up to cross-over point; [‡] Unified Aphasia Score is a standardised T-score based on the AAT (German), Protocole Montreal-Toulouse-86 (French) and the WAB (English) assessments. A-tDCS = Anodal tDCS, S-tDCS = Sham tDCS, C-tDCS = Cathodal tDCS; A/C-tDCS = Anodal or Cathodal tDCS; A-tDCS (B)/(W) = Anodal tDCS over Broca's or Wernicke's area; AAT = Aachen Aphasia Test; WAB-R-AQ = Western Aphasia Battery-Revised Aphasia Quotient; K-WAB-AQ = Korean Western aphasia battery Aphasia Quotient; BDAE(ASRS) = Boston Diagnostic Aphasia Examination (Aphasia Severity Rating Scale); BNT = Boston Naming Test. Token Test (De Renzi and Faglioni 1978); AAT T-score cut-offs; Severe: ≤ 42.5 ; Moderate: $> 42.5 \leq 52.5$; Mild: $> 52.5 \leq 62.5$; Minimal/no aphasia: > 62.5 based on stanines and percentiles from Huber et al (1983) Aachen Aphasia Test. Gottingen: Hogrefe (<https://www.testzentrale.de/shop/aachener-aphasie-test.html>).

Table 24. PICO 7b SLT Tailored by level of difficulty versus untailored by level of difficulty

Study ID	N	Male/female	Age in years Mean (SD) [range]	Time post onset Mean (SD) [range] in months	Aphasia severity at baseline Mean (SD) [range]
Braley 2021	36	<u>Tailored SLT</u> : 10/7 <u>Non-tailored SLT</u> : 8/7 (4 unreported)	<u>Tailored SLT</u> : 58.9 (10) [43-81] <u>Non-tailored SLT</u> : 64.2 (9.9) [49-84]	<u>Tailored SLT</u> : 53 (56) [5-228] <u>Non-tailored SLT</u> : 38.1 (32) [8-131]	WAB-R AQ <u>Tailored SLT</u> : 61.62 (24.28) [9.2 – 87.2] <u>Non-tailored SLT</u> : 66.02 (19.08) [31.8-89.7]

N = participants randomised to comparison; WAB-R AQ = Western Aphasia Battery Revised Aphasia Quotient.

Supplement 21: Results of the votes for the Expert Consensus Statements

PICO 5b Expert Consensus Statement In people with aphasia following stroke where access to one-to-one therapy is constrained by resource availability, we suggest that group therapy delivered in addition to one-to-one SLT may facilitate increased therapy time, provide additional opportunities to use language in a social context and enhance communication confidence. We also suggest that the therapy timing and format should follow other recommendations in this clinical guideline, aiming to enhance language recovery, communication, participation, and quality of life.	12/12 (100%) writing group members agree.
PICO 6 (a) – (f) Expert Consensus Statement 1. In people with aphasia following stroke, we suggest that in the clinical context, SLT should be delivered alone rather than SLT alongside tDCS. 2. Individualised tDCS approaches for post-stroke aphasia may be beneficial, but further evidence is required.	10/12 (83.3%) writing group members agree with first statement. 12/12 (100%) writing group members agree with remaining statement.
